HIV Resource Guide

Resources Available at the State Level in North Dakota and South Dakota and How Our Tribal Partners Can Utilize Them

Prepared by the Capacity Building Assistance and HIV Project
Great Plains Tribal Chairmen’s Health Board
ACKNOWLEDGEMENTS

This resource guide was made possible by the efforts, input, and support of several individuals and groups who dedicate their days to this type of work, both within the field of HIV and elsewhere. While it is impossible to know all those who contributed, some must be mentioned specifically:

Jordan Catlett spent time checking the guide's contents for accuracy and ensuring the depth of the information herein.

Robert Foley provided invaluable expertise and insight in reviewing the questionnaires for both this project and the community readiness assessment.

Katie Kammert was integral in writing and producing the guide, and assisted with the background and field research that informed its contents.

Kerry Ben-Joseph, for putting the guide up on the web.

Staff at both the North Dakota Department of Health and the South Dakota Department of Health took time out of their busy schedules to provide invaluable support of and information for this guide, and much of what is most useful within its pages is thanks to them. This staff includes particularly:

North Dakota Department of Health: Gordana Cokrlick, Gino Jose, Dee Pritschet, Lindsey VanderBusch, and Sarah Weninger

South Dakota Department of Health: Amanda Gill, April Ivey, and Christine Olsen

The GPTCHB Program Staff, particularly Jennifer Giroux, Vanessa Tibbitts, Maylynn Warne, Kristine Watts, and the entire Infectious Disease Taskforce.

and

GPTCHB’s partner tribes, who give us our mandate and motivation and who support us in everything we do.

CONTRIBUTORS

The individuals who contributed to this resource guide include PJ Beaudry, Jordan Catlett, Jennifer Giroux, and Katie Kammert.

INTRODUCTION

Sexually-transmitted diseases/infections (STDs) are a problem central to the mandate of public health within the United States, and their impact is profoundly felt among American Indian and Alaska Native (AI/AN) populations. In 2010, increased STD rates and outbreaks in North Dakota and South Dakota refocused attention back to Gonorrhea, Chlamydia, and later Syphilis, raising the possibility that human immunodeficiency virus (HIV) may follow, as the modes of transmission are the same. Motivated by this potential, the Capacity Building Assistance (CBA) and HIV Project at the Great Plains Tribal Chairmen’s Health Board (GPTCHB) received special funding to compile this resource guide.

Founded in 1986, Great Plains Tribal Chairmen’s Health Board serves as an advocate and liaison to U.S. Department of Health and Human Services entities, including the Indian Health Service, and state and local partners on behalf of its 17 member Tribes and one Indian Service Area in the Great Plains states of South Dakota, North Dakota, Nebraska, and Iowa. In addition, the nonprofit organization works with Tribal communities through its multifaceted research, preventative, outreach, academic, recovery support, technical assistance, and epidemiologic programs to improve the health status of and eradicate health disparities among the region’s 170,000 Tribal members.

The CBA and HIV Program began at GPTCHB in 2009, seeking to build capacity to support HIV prevention via training, technical assistance, and support through the mobilization of research, advocacy, and outreach. In the past, it has conducted projects utilizing the Community Readiness Model to: 1) develop a needs assessment for GPTCHB’s Tribal partners related to HIV and the reduction of HIV-related stigma; and, concurrent with the production of this guide, 2) to determine Tribal readiness to respond to an HIV outbreak. It also promoted HIV testing in Native communities through partnership with and participation in the National Native HIV/AIDS Awareness Day. Though the program is now coming to an end, this resource guide serves as a fitting epilogue to ensure its lasting impact within our Tribal communities.

Ultimately, we hope that this guide will serve three interrelated objectives:

1. To enhance the capacity of our partner Tribes to respond conduct HIV prevention and education and to respond to an outbreak of HIV should one emerge;
2. To support the first goal by illuminating resources at the state level in North Dakota and South Dakota available to Tribal members such that our partner Tribes in those states may be able to take advantage of them;
3. To connect state health professionals with those at the Tribal level, thereby enhancing communication and dialogue between these two groups – the most natural of partners in health;

If this resource guide is successful in accomplishing these three objectives, we will have moved closer to accomplishing the overall goal of reducing the impact of HIV and AIDS on our partner Tribes.

The guide is split into sections based upon the types of information/services one is seeking, with each of these sections split into sub-sections which provide information on these services specific to both North Dakota and South Dakota. Some general instructions on how best to utilize its contents:

- Use the Table of Contents (above) to find the section you are interested in finding out more about, and then identify the page on which that section begins for your state
- The descriptions beginning each section provide some general information that may be useful in identifying where to look or how to consider the resources listed within that section
- An abridged, web-based version of this guide is available on nptec.gptchb.org under “NPTEC Resources”, including a Google Map that presents the same resources contained herein spatially and which allows for user interaction
- Keep in mind that the contents of this guide are subject to change

We hope you find this guide a useful tool to navigating HIV resources within North Dakota and South Dakota, and if you would care to recommend additional resources for inclusion, we always welcome such recommendations.

PJ Beaudry, CBA/HIV Program Manager – June, 2014
BACKGROUND

The human immunodeficiency virus (HIV), which causes acquired immune deficiency syndrome (AIDS), is a defining infectious disease of this generation. However, less is known about the epidemic as it affects the American Indian and Alaska Native (AI/AN) population compared to larger populations. This speaks to the difficulties facing those working to understand and address health generally within Native communities. This background presents the available data regarding HIV and AIDS at a national and state level, as well what additional information is available in the published literature, to assist in an understanding of trends within the available data, prevention/education, and treatment/management of the disease.

NATIONAL DATA AND TRENDS

According to the CDC, AI/AN populations accounted for less than 1% of new HIV infections in 2010. Most cases are among men, and most are attributable to male-to-male sexual contact. Among women, cases are primarily attributable to heterosexual contact. However, both AI/AN men and women account for the highest rates of HIV infection related to injection drug use (IDU) among all races/ethnicities. The number of AIDS cases has remained relatively stable since 2008, though HIV/AIDS stands as the ninth (9th) leading cause of death among AI/ANs aged 25 to 34. An examination of contact health service delivery area (CHSDA) counties from 1999 to 2009, meanwhile, found HIV/AIDS to be the fifth (5th) leading cause of infectious disease mortality among AI/AN populations, and the second (2nd) among AI/ANs aged 20 to 49. Historically, AI/AN populations were hit by the epidemic later than other races/ethnicities in the United States. As a result, HIV/AIDS mortality rates were significantly lower among AI/AN populations compared to whites between 1990 and 1999. However, this trend shifted dramatically between 1999 and 2009, with AI/AN populations having significantly higher mortality rates related to HIV/AIDS compared to whites during that period. Some hypothesize that this change likely coincided with the rising availability of antiretroviral therapy — which is likely less accessible for AI/AN populations — and a delay in diagnosis that characterizes many health conditions among AI/ANs. Regardless, cumulatively speaking and significantly, overall rates between 1990 and 2009 were significantly higher among AI/AN populations, with rates in the Northern Plains being particularly high. It is worth noting that by 2001, HIV/AIDS cases were occurring more frequently in women and children under the age of 13 within AI/AN populations than within others.

CHALLENGES WITHIN PREVENTION AND EDUCATION

It is often said that prevention is the best form of treatment, and this is certainly the case for HIV/AIDS. However, the CDC and many others have noted that significant challenges to prevention efforts exist within AI/AN populations. First, it is estimated that 21% of AI/AN individuals living with HIV did not know their status by the end of 2010, compared to 16% of those in the general population. Second, the cultural diversity of the myriad of federally recognized Tribes in the US presents significant challenges to the production and dissemination of appropriate and meaningful prevention materials. Third, low socioeconomic status — including lower rates of housing, education, and employment and higher rates of poverty — make both prevention and treatment (see below) a challenge.

1 CDC, 2014.
2 Cheek et al., 2014.
3 Reilley et al., 2014.
4 Bertolli et al., 2014.
5 CDC, 2014.
7 CDC, 2014.
8 CDC, 2014.
AI/AN populations often exhibit much a higher prevalence of risk factors for HIV/AIDS as well. A survey administered to AI/AN patients following testing in Montana, for example, found that just 10% of respondents did not report engaging in at least one behavior that put them at risk for infection. Native populations have the second highest rates of STDs – which share many risk factors with HIV and often increase risk for HIV themselves – in the nation. Significantly, rates have historically been particularly high among Great Plains Native communities, and are increasing in this region (unlike much of the rest of the country). The latest estimates show that the situation within the Great Plains has become more diverse, with rates and trends differing significantly by state, though STD rates are still exceptionally high and increasing in North Dakota and South Dakota. Evidence exists that these high rates may be the result of high-risk sexual behavior that is often observed within AI/AN populations. A Bureau of Indian Affairs (BIA) survey conducted in BIA schools between 2000 and 2001, for example, found that rates of sexual activity and sex with multiple partners were higher than national averages, with rates of condom use slightly lower than national averages. Further, alcohol and illicit drug use, both of which tend to be more frequent and to begin at a younger age among AI/AN populations, often serve to affect judgment and to increase one’s risk for HIV infection.

Mistrust of the government and of the Indian Health Service (IHS), as well as concerns about quality of care and confidentiality at IHS facilities, also often hold back the delivery of prevention/education and treatment. Confidentiality concerns are often particularly significant among gay and bisexual (Two Spirited) men and women and among those living in the rural, small communities that often characterize reservations. These concerns often limit access to testing and education among these populations, and have been named as a primary barrier to obtaining STD services in general at IHS facilities (along with several inconveniences that are also frequently noted as being present). In fact and significantly, these fears may be instrumental in encouraging the use of state-funded facilities located off-reservation for testing and other services by AI/AN populations. In addition to issues related to confidentiality, limitations in resources and funding often hold back the success of efforts at the Tribal level. For example, a needs assessment conducted by GPTCHB in 2006 found that just 68.4% of IHS clinicians reported that education regarding HIV risk factors and risk reduction strategies were being performed at their clinic, and just 42.1% reported that education regarding available HIV services was conducted.

Finally and perhaps most significant for prevention efforts at the national and state level is that substantial issues with AI/AN HIV data, including surveillance difficulties and extensive misclassification, may hide the true impact of HIV and hinder efforts to secure funding. Some states with very large AI/AN populations (including California, Washington, and New York) delayed formal and dedicated HIV/AIDS surveillance until the early 2000s. Further, it is important to note that Tribal-specific data is often unavailable, and given the small size of many Tribes, seeking to produce such data is likely to result in misleading estimates. Much of the data regarding AI/AN populations would need to come from the IHS, as the primary healthcare provider for these populations, but their record of reporting cases varies. According to the GPTCHB needs assessment described above, “over 20% of [IHS] clinicians

indicated that HIV cases are not consistently reported\(^{22}\) to state and county health departments. Regardless, while it may be likely that the majority of cases discovered by the IHS are reported – in fact, inquiry related to the project presented in this report illuminated that within North Dakota and South Dakota, the IHS often takes advantage of state laboratory facilities, which ensures the automatic reporting of new cases to the state – very little is known about the reporting practices of Tribally-operated health facilities. Jurisdictional issues that plague many of the relationships between Tribes, states, and the federal government often worsens this lack of knowledge. However, racial misclassification of Tribal members more frequently occurs at state facilities, where patients must be asked about their race/ethnicity in the course of a health visit.\(^{23}\) Ultimately, these issues likely contribute to an underestimation of the need for services and to denial – both within and outside of Native communities – regarding the impact of HIV on the population. Not only can this influence the effectiveness of prevention measures, materials, and messages, but with funding often tied to available epidemiological information (a fact verified by some of our state partners in the Great Plains), inaccurate data could be catastrophic for Native programming and those that serve AI/AN populations.\(^{24}\)

**HIV TREATMENT AND MANAGEMENT**

In most areas of the United States, HIV/AIDS is no longer considered a death sentence. Extensive treatment and management options exist, including those that help with the substantial cost of these options. However, like prevention, HIV treatment and management among AI/AN populations is unfortunately not well understood and suffers from unique challenges that impact the effectiveness of the commonly-used treatment options and resulting morbidity and mortality rates. It has been extensively noted, for example, that AI/AN populations tend to progress from HIV to AIDS faster than any other population in the United States.\(^{25}\) Further, it has become evident that AI/AN populations have the shortest survival time between the receipt of an AIDS diagnosis and death.\(^{26}\)

It has been noted that as of 2006, AI/AN populations had largely not been included in studies demonstrating the efficacy of antiretroviral therapy for HIV, leaving its benefit within the population likely but undemonstrated. The first study to examine the effectiveness of highly-active antiretroviral therapy (HAART) among American Indians found a decline in death rates of 288% over six years, a reduction that is very similar that within other populations on treatment. This suggests, according to the authors of the study, that “... earlier diagnosis and access to effective medical treatment will be key factors in reducing the disparities in health brought about by HIV infection in [N]ative communities”.\(^{27}\) Despite this newly demonstrated efficacy, given the socioeconomic disparities and difficulties accessing care that often plague Native populations, the authors hypothesized that adherence to HAART treatment – which is crucial to its success – may pose unique challenges (evidenced by the trends regarding transition from HIV to AIDS and short survival with AIDS described above). As evidence of a potential source of the difficulties accessing care that many AI/ANs face, the aforementioned needs assessment conducted by GPTCHB found that “while 84.2% of clinicians reported that HIV pre-test counseling was done routinely at their facility, just 68.4% said that post-test counseling was offered”.\(^{28}\)

Ultimately, this evidence suggests that given the effectiveness and importance of HIV treatment and management, and the fact that HIV treatment was reported to be available at just 50% of IHS facilities in the Aberdeen area\(^{29}\), making other options available and accessible to AI/AN populations is crucial to reduce the impact of HIV/AIDS.

\(^{29}\) Drobnik et al., 2006.
within Native communities. Significantly, for example, according to the White House Office of National Aids Policy, AI/AN populations accounted for just 1% of Ryan White service visits – a crucial source of treatment, case management, and other HIV services – in 2010.\textsuperscript{30} This need for collaboration and partnership with larger resource networks is largely true of surveillance efforts and prevention as well.\textsuperscript{31} It is the hope that this resource guide will help to connect Tribal community members with needed HIV services while provide more insight into and avenues of collaboration within HIV and AIDS in North Dakota and South Dakota.

The individuals (and bodies) listed below can provide a great deal of comprehensive information regarding HIV and AIDS – as well as input, advice and support – to Tribal members, Health Departments, and governments within their respective states. For general HIV-related questions, these individuals will likely be the best place to begin.

NORTH DAKOTA

HIV PROGRAMMING

The following members of the North Dakota Department of Health make HIV generally or various aspects of its scope their daily business. Each is a well of knowledge about their particular area (in fact, much of the information regarding North Dakota presented in this guide came from their generous input), and general areas of inquiry that each should be able to address have been listed below. For general inquiries about HIV in North Dakota, contact Lindsey VanderBusch (top left, below).

Lindsey VanderBusch, HIV/STD Program Director
- **Phone:** 701-328-4555
- **Email:** lvanderbusch@nd.gov
- **Contact for:**
  - General information regarding HIV in North Dakota and available programming and other opportunities therein
  - Availability of state resources for programming and outbreak response

Gino Jose, HIV Prevention Coordinator
- **Phone:** 701-328-1059
- **Email:** gjose@nd.gov
- **Contact for:**
  - Information regarding educational materials and condoms
  - Questions about ordering prevention supplies

Gordana Cokrlic, Ryan White Program Manager
- **Phone:** 701-328-2379
- **Email:** gcokrlic@nd.gov
- **Contact for:**
  - Information regarding Ryan White services, including eligibility and continued enrollment requirements
  - Assistance with referral to Ryan White case management services

Dee Pritschet, HIV Surveillance Coordinator
- **Phone:** 701-328-2366
- **Email:** dpritschet@nd.gov
- **Contact for:**
  - Information regarding ND state-level epidemiological information regarding HIV
  - Questions regarding laboratory or treatment results

Christopher Wegner, Outreach Coordinator
- **Phone:** 701-271-6373
- **Email:** cwegner@famhealthcare.org
- **Contact for:**
  - Assistance with and support for ongoing, need-based informational or testing events
FIELD EPIDEMIOLOGISTS

North Dakota’s Field Epidemiologists have been and continue to serve as the North Dakota Department of Health’s eyes, ears, and primary relationship builders within North Dakota communities, providing a local focus and body of knowledge crucial for HIV efforts and services. Further, they are always available to support education, testing, investigation, logistics, and other efforts. They serve as a primary contact for those who are newly diagnosed with HIV, assisting with access to treatment and other services, including Ryan White case management. (For a map of the geographic areas covered by each Field Epidemiologist, see Appendix 3, Figure 4.)

Gerry Haag, Dickinson
- Phone: 701-483-0171
- Email: ghaag@nd.gov

Deanna Solhjem, Bismarck
- Phone: 701-328-9760
- Email: dsolhjem@nd.gov

Twila Singh, Fargo
- Phone: 701-241-1386
- Email: tsingh@nd.gov

Shawn McBride, Grand Forks
- Phone: 701-787-8130
- Email: smcbride@nd.gov

Jennifer Schmidt, Jamestown
- Phone: 701-252-1325
- Email: jschmidt@nd.gov

Linda Larson, Minot
- Phone: 701-838-3340
- Email: llarson@nd.gov

Lacy Oyloe, Williston
- Phone: 701-774-6405
- Email: loyloe@nd.gov

SOUTH DAKOTA

HIV PROGRAMMING

Like their counterparts in North Dakota, the members of the South Dakota Department of Health listed below are South Dakota’s resident experts on HIV within the state, and serve as the backbone for its HIV programming. They are similarly knowledgeable and can serve as invaluable resources within their particular areas of focus, described below. For general inquiries about HIV in South Dakota, contact April Ivey (left, below).

April Ivey, HIV Prevention and Surveillance Program Manager
- Phone: 605-773-4785
- Email: April.Ivey@state.sd.us
- Contact for:
  - General questions regarding HIV and related programming in South Dakota
  - Questions regarding HIV prevention materials or participation in SD HIV Prevention Planning Group meetings

Christine Olson, Ryan White Program Manager
- Phone: 605-773-3523
- Email: Christine.Olson@state.sd.us
- Contact for:
  - Information regarding Ryan White services, including eligibility and continued enrollment requirements
  - Assistance with referral to Ryan White case management services
DIS OFFICES AND FIELD STAFF

Also like their counterparts in North Dakota, the Disease Intervention Specialists in South Dakota serve as on-the-ground representatives and investigators within infectious disease, providing a local focus and body of knowledge that is similarly crucial to South Dakota HIV efforts and services. As such, they serve as a primary contact for those who are newly diagnosed with HIV, assisting with confirmatory testing and access to treatment and other services, including Ryan White case management. (For a map of the geographic areas covered by each office, see Appendix 3, Figure 5.)

TRIBAL HEALTH

In terms of proximity to Tribal members living on reservations within North and South Dakota, few resources are more easily accessible than those operated by the Tribal Health Departments and the Indian Health Service. The Tribal Health Departments can often provide information about local testing events, educational opportunities, and other sources of information and services related to HIV. The IHS forms the center of American Indian health on most Northern Plains reservations, and serves as a primary provider of health services and referrals, including those for HIV screening and treatment. Below is listed the contact information for the Health Department and Tribal/IHS clinics specific to each Tribe, which are listed by state and then alphabetically.

North Dakota and South Dakota fall into the Great Plains Area Indian Health Service, which can be contacted for general inquiries using the information listed immediately below:

- **Address:** Federal Building, Room 309
  115 4th Avenue Southeast
  Aberdeen, SD 57401
- **Phone:** 605-226-7582
- **Fax:** 605-226-7321
- **Website:** http://www.ihs.gov/Aberdeen/

NORTH DAKOTA

SPIRIT LAKE TRIBE

HEALTH DEPARTMENT

**Veronica Leaf,** Acting Tribal Health Director

- **Mailing Address:** PO Box 480, Fort Totten, ND 58335
- **Phone:** 701-766-7206
- **Email:** slthealthdirector@gondtc.com
- **Website:** www.spiritlakenation.com/tribalhealth

TRIBAL/IHS CLINIC(S)

**Spirit Lake Health Center**

- **Address:** 816 3rd Avenue North, PO Box 480, Fort Totten, ND 58335
- **Website:** www.ihs.gov/aberdeen/index.cfm?module=ab_ao_hf_slsu
- **Details:**
  - Ambulatory care facility staffed by three (3) physicians
  - Complex outpatient and inpatient cases referred to a contract facility
  - Dental clinic
  - Diabetes (including comprehensive screening, education, and treatment) and cardiovascular care programs
STANDING ROCK SIOUX TRIBE

HEALTH DEPARTMENT

Margaret Gates, Tribal Health Director

- **Mailing Address**: PO Box D, Fort Yates, ND 58538
- **Phone**: 701-854-7206
- **Email**: mgates@standingrock.org

TRIBAL/IHS CLINIC(S)

Fort Yates Hospital

- **Address**: N-10 North River Road, Fort Yates, ND 58538
- **Phone**: 701-854-3832
- **Website**: www.ihs.gov/aberdeen/index.cfm?module=abAoHfSrsu
- **Details**:
  - Fully accredited, 12-bed hospital staffed by three (3) physicians and two (2) nurse practitioners
  - Inpatient, outpatient, dental, behavioral health, optometry, and dialysis services

McLaughlin Health Center

- **Address**: 701 East 6th Street, PO Box 879, McLaughlin, SD 57642
- **Phone**: 605-823-4458
- **Details**:
  - Outpatient health center staffed by one (1) physician and two (2) registered nurses

Cannonball, Bullhead, and Wakpala Health Stations

- **Details**:
  - Minimal outpatient care services
  - Staffed by a physician’s assistant, a public health nurse, and a community health representative
    - Visited at least once per week by a physician from Fort Yates Hospital

THREE AFFILIATED TRIBES

HEALTH DEPARTMENT

Debbie Hall-Thompson, Tribal Health Director

- **Address**: 404 Frontage Road, New Town, ND 58763
- **Phone**: 701-627-4781

- **Details:**
  - Ambulatory outpatient care clinic including general medicine, lab, radiological, ENT, pharmacological, dental, public health nursing, mental health, and optometry services
HIV PREVENTION

They say that the best treatment for any illness is preventing it in the first place, and that is certainly true of HIV. Huge amounts of resources are available for HIV prevention, including educational materials, condoms, trainings, and others. Ultimately, the best way to prevent HIV is to train oneself and others on the nature of the disease, its risk factors, and how to prevent infection.

This section includes information about such resources, including suggested language to use in the production of materials, how to order materials that have already been produced or obtained at the state level, and other helpful tips and advice.

PREVENTION LANGUAGE

As a part of the information-gathering for the production of this guide, numerous prevention and other educational materials regarding HIV and STDs were collected from state partners. These materials are cached at the Great Plains Tribal Chairmen’s Health Board, and many can be ordered from the state for dissemination at the Tribal level (see below). However, the production of Tribal- or Native-specific materials is often extremely helpful in the effort to promote prevention at the Tribal level. Therefore, the authors of this guide reviewed the collected materials and developed some language that Tribes may consider using in educational materials that they produce.

(Note: materials are often most helpful if they include for readers, in addition to that regarding prevention, information about testing and treatment options in their area and contact information for those whom they can call for questions. The former is available in other sections of this guide, and can be pulled from there for the purpose of these materials if need be.)

SAMPLE LANGUAGE

HIV stands for human immunodeficiency virus; it is this virus that causes acquired immunodeficiency syndrome (AIDS). Oftentimes, people do not want to believe that HIV can happen to them or their family. However, it may only take one bad decision or mistake to become infected.

The transmission of HIV occurs through the sharing of infected body fluids, including blood, semen, vaginal fluid, and breast milk. HIV cannot be transmitted through shaking hands, hugging, or other basic physical contact. Further, the amount of virus within body fluids must be high for transmission to take place, so it is highly unlikely that transmission could occur by, for example, sharing drinks or utensils. However, activities like sexual contact, intravenous drug use, and the sharing of needles present significant risks.

There is no vaccine or cure for HIV, but it can be prevented by taking some basic precautions:

1. **DO NOT** engage in unprotected sex (including oral, vaginal, or anal intercourse)
   - The best way to protect yourself from HIV is to abstain from sexual intercourse of any kind
   - Oral ulcers, bleeding gums, genital sores, and other cofactors involved with STD infection increase the risk of HIV transmission
   - If you do engage in sexual activity:
     - Always use latex or polyurethane condoms or dental dams
     - Do not use damaged, expired, or used condoms
     - Always use water-based lubricants (oil and petroleum make latex condoms less effective)
o Limit your number of sexual partners and preferably remain in a mutually-exclusive relationship
o Abstain from engaging in sexual activity while drunk or high – alcohol and drug use inhibit good choices, leading to risky behavior and a higher likelihood of infection

2. DO NOT share needles or injection equipment

- Needles used for drugs or medications (including steroids, vitamins, insulin, hormones, and others), tattoos, and body piercing can transmit HIV
- Always use new, sterile needles and equipment (including cotton, rinse water, cookers, and other equipment)
- See a qualified professional for tattoos or body piercings
- Look into needle exchange programs that may be available in your area

3. Know your HIV status – GET TESTED

- If you are sexually active, consider getting yearly tests for STDs, including HIV
  - Not all STDs, including HIV, have obvious symptoms, or symptoms may appear several months to several years after contact (as with HIV)
  - HIV can infect any sexually active person, no matter their age
- Tests (whether conventional or rapid testing) are often free and always confidential
- Pregnant women should get tested to prevent spreading HIV to their baby in the womb, during birth, or while breast feeding
  - Untreated HIV-positive pregnant women have a 15-25% chance of passing HIV to their unborn child, but proper prenatal care can reduce this likelihood to 1-2%
- Pre-exposure prophylaxis (PrEP) is recommended for high risk groups and is 70-90% effective if taken every day; however, it costs upwards $12,000 per year and requires motivation on the part of the patient and community

4. COMMUNICATE with your sexual partner(s)

- Discuss past sexual partners and intravenous drug use, safe sexual practices, and getting tested for STDs/HIV
- Protect yourself, even if your partner will not
- If your partner has or is newly diagnosed with an STD, get treatment with them
- Refrain from sexual activity with those you suspect may have HIV or those who have visible symptoms of STDs such as rashes, sores, redness, and/or discharge near the sexual organs, rectum, or mouth

EDUCATION AND TRAINING

Numerous educational and training materials, resources, and opportunities exist at the national and North Dakota and South Dakota state levels that Tribes can take advantage of to enhance their own programming.

The AIDS Education and Training Center (AETC) offers a wide battery of resources on its website for free, in addition to regular webinars and other trainings. See http://aidsetc.org/resources for more information.

---

Several websites provide free educational materials, including those which can be printed and handed out at the Tribal level:

- CDC’s Act Against AIDS includes free and printable posters, banners, and brochures
- AIDS InfoNet contains numerous free fact sheets with information on a variety of HIV-related topics
- Greaterthan.org offers educational materials and state-specific information and advocacy
- Kaiser - HIV/AIDS includes a compilation of HIV-related materials, including information regarding its global impact
- The National Native American AIDS Prevention Center provides resources, data, and other information specific to HIV among American Indian populations

**NORTH DAKOTA**

HIV/AIDS prevention materials and condoms can be ordered from the North Dakota Department of Health through a form which can be obtained by contacting Gino Jose at 701-328-1059. The form is also included in the Appendices of this Guide. Further, the North Dakota Department of Health has expressed interest in partnering with Tribes to produce culturally-sensitive prevention materials and conduct outreach to promote testing events. Contact Lindsey VanderBusch at 701-328-4555 for more information.

North Dakota also offers Lunch and Learn sessions on the 4th Wednesday of every month, and sponsor an HIV/STD Symposium every two years (in fact, one is taking place in Bismarck this year between September 17th and 18th). See [http://www.ndhealth.gov/HIV/events.htm](http://www.ndhealth.gov/HIV/events.htm) for more information and to sign up.

Finally, North Dakota publishes monthly and quarterly health newsletters as well as one specific to HIV/AIDS in North Dakota, for which one can sign up by contacting Lindsey VanderBusch at 701-328-4555.

**SOUTH DAKOTA**

The South Dakota Department of Health occasionally offers trainings at the state-level, many of which are pre-recorded and regularly available. Those interested can contact April Ivey at 605-773-4785 or by visiting [http://www.effectiveinterventions.org](http://www.effectiveinterventions.org).

South Dakota also has an HIV Prevention Planning Group (PPG), which, as its name implies, is central to decision-making surrounding HIV prevention in the state. The PPG’s meetings are open to the public and offer time for public comments. Again, contact April Ivey at 605-773-4785 for more information.

**COMPREHENSIVE PREVENTION SERVICES**

**SD PREVENTION FOR POSITIVES**

South Dakota’s comprehensive Prevention for Positives program supports those who are HIV-positive by linking them to routine care and treatment as well as interventions to improve retention in and adherence to both. Further, they assist HIV positive individuals in reducing the likelihood that they may infect partners, others, or – for women of childbearing years – their children through behavioral and other interventions as well as risk reduction services. Finally, they assist with referral to other medical and social services, including mental health and substance abuse services.33

SUNDANCE SUPPLIES

In late 1980s the Great Plains Area Indian Health Service recognized the possibility of HIV transmission through piercing of skin and flesh offerings during annual Sundance ceremonies. With this possibility in mind, it is recommended that education about HIV and medical supplies be provided to Sundance leaders and dancers.

PRECAUTIONS

These precautions were originally written in 1997 and have been widely adapted and utilized since then.

1. Use latex gloves when piercing or taking flesh offerings, and change gloves between contact with each dancer.
2. A person with open cuts or sores on the hands should avoid assisting with piercing and exposure to blood. Gloves are only a barrier; they cannot prevent needle sticks or scalp lacerations.
3. If gloves are not available, wash hands in a bleach and water solution (one part bleach; 10 parts water).
4. Use a different scalpel or needle on each dancer or participant.
5. Dispose of scalpels and needles in puncture-proof containers.
6. Use the bleach and water solution (1:10) in the puncture-proof container to kill any organisms on used scalpel and needles.
7. Take puncture proof containers to IHS service unit for disposal. Do not leave the used container where someone could get exposed to its contents. The service unit can dispose of containers in a manner that will prevent injuries.
8. Do not share items exposed to the blood of another person. Example: ropes or pegs.
9. If you are not able to get supplies (scalpels, needles, gloves, bleach, puncture proof containers) or need more, contact the local IHS service unit.

POTENTIAL SOURCES OF SUPPLIES AND FUNDING

The Indian Health Service formerly provided supplies for Sundance safety. From 2010 to 2014, the CBA/HIV Project took over this service. The grant funding this Project has been completed and these supplies are no longer available. Therefore, we recommend that Tribes look into the following potential sources of funding and supplies to fill in this gap. Note that these funding sources are not guaranteed and will require proposals to secure.

FUNDING

- Master Contract with IHS: [http://www.ihs.gov](http://www.ihs.gov)
- Magic Johnson Foundation: [MJFPrograms@magicjohnsoncharities.com](mailto:MJFPrograms@magicjohnsoncharities.com)
  - Write a proposal for general HIV/AIDS Prevention among the Native American Tribes
  - Write a proposal for Open Grant Opportunity
- National Alliance of State and Territorial AIDS Directors
  - Address: 444 North Capitol Street, Northwest- Suite 339, Washington DC 2001
  - Phone: 202-434-8090
  - Website: [www.nastad.org](http://www.nastad.org)

HIV COUNSELING, TESTING, AND/OR REFERRAL SITES

Knowing one’s status by getting tested, understanding risk factors and next steps through comprehensive counseling, and being referred to services are crucial intermediate steps between the prevention and treatment of HIV/AIDS. The sites listed below partner with their respective states to provide one, some, or all of these services.

AIDS.gov also offers a very convenient way to locate testing sites and other HIV services near you. Simply go to the HIV Testing Sites and Care Services Locator and enter your location: http://locator.aids.gov/utm_source=NHTD+2013+%231&utm_campaign=2014NHTDemail_1&utm_medium=emai

NORTH DAKOTA

The sites listed below provide HIV antibody testing, counseling, and/or referral for at-risk individuals, including Tribal members. Often, these services are provided for a nominal fee or free to residents of North Dakota, and many are flexible with those who are unable to pay or whose insurance does not cover services rendered. Sites are distributed throughout the state, and appointments are encouraged.

The North Dakota Department of Health assures that the sites below adhere to the strictest rigors of confidentiality allowed under the law.

HIV TREATMENT

HIV treatment is a life long and complicated process, and often bears an extremely high economic burden. However, the resources listed below provide crucial information and access to services, often on a plan that accommodates the economic and logistical needs of HIV positive patients to whatever extent possible.

When a new case of HIV is reported to the state, their response follows a standardized process that ensures that the needs of each patient and their partner(s) are met quickly and completely:

1. A DIS Officer (SD) or Field Epidemiologist (ND) is dispatched to contact the individual and set up a time to meet with them to collect contact and other information and to provide them with materials and information regarding next steps and available options
   a. These case workers generally assist with partner notification and other crucial steps as well
2. Individuals are referred to a Ryan White case manager in their area, who will be able to submit an application for Ryan White services and assist the individual with establishing a plan to cover their HIV treatment and other ongoing care
3. If an individual is deemed eligible for Ryan White (which is described in detail below), the program assists with transportation, care, counseling, case management, and referral to other resources as necessary

As is clear from the above, DIS Officers in South Dakota and Field Epidemiologists in North Dakota are often the first and most important contact to ensure that individuals affected by HIV/AIDS obtain the treatment and other services that they need. Contact information for these individuals has been provided above, and it is strongly recommended that this information be shared with Tribal health workers and those newly diagnosed with HIV to ensure this crucial first connection.

RYAN WHITE CARE ACT, PART B - CASE MANAGEMENT

Part B of the Ryan White Care Act (also known as the North Dakota Comprehensive HIV/AIDS Resources and Emergency Services, or ND CARES, in that state) provides low-income residents of North Dakota and South Dakota who are HIV positive with access to support and services to assist with managing their disease.

Enrollment is facilitated through contact with and referral from the Indian Health Service or state Disease Investigation Specialists/Field Epidemiologists. Eligibility is limited to those who maintain residence within their respective state, who lives below 300% of the Federal Poverty Level, and who have been confirmed HIV positive. (It is worth noting that this confirmation need not be conducted independently by the state.) Once enrolled, patients are required to re-enroll every six months, to maintain adherence to antiretroviral (ART) therapy, and to participate in ongoing health assessments. It is worth noting that it is imperative to maintain a 95% adherence in order to prevent the development of drug resistance.  

As a payer of last resort, the Ryan White Care Act will cover most expenses remaining after the application of IHS, Medicaid, or other insurance benefits. Applicants to the program are often be encouraged to investigate and pursue other insurance and payment options, with the help of case managers, prior to the application of Ryan White benefits. However, in some cases Ryan White benefits may be used to assist with the payment of premiums for additional insurance. Eligibility for reimbursement may be limited in some cases.

---

35 Taylor, 2014.
36 Adapted from North Dakota Department of Health, 2009.
NORTH DAKOTA

In North Dakota, all of the details regarding the Ryan White Care Act stated above apply, with some additional considerations. First, HIV services covered under the Ryan White Care Act can be obtained anywhere and reimbursed, though the program also reimburses patients for most or all travel costs incurred for the sake of adherence to treatment and to obtain services. Ryan White case managers in North Dakota are more than willing to conduct their business over the phone, by email, or otherwise as need be for those for whom transportation is a challenge.

For more information about the Ryan White Care Act/ND CARES program in North Dakota or for assistance in contacting a Ryan White case manager near you, contact Gordana Cokrlic at 701-328-2379 or via email at gcokrlic@nd.gov.

SOUTH DAKOTA

All of the above also applies in South Dakota, though again with one caveat. South Dakota Ryan White case managers are similarly flexible regarding case management, and are willing to conduct sessions with patients over the phone or email if need be. However, they recommend that at least one visit, generally the first, be conducted in person to collect contact and other information and to ensure that the patient gets the best and most appropriate case management possible.

For more information about the Ryan White Care Act in South Dakota, contact Christine Olson at 605-773-3523 or via email at christine.olson@state.sd.us. Information and an application can also be obtained at https://doh.sd.gov/diseases/infectious/ryanwhite/.

APPENDIX 2: SOUTHERN DAKOTA PREVENTION PLAN

The South Dakota Prevention Plan highlights resources for organizations and individuals who are dedicated to HIV prevention and treatment. This document includes descriptions of the state's existing HIV prevention, care and treatment resources and also addresses the specific needs of target populations in the state and the action plans needed to address gaps between services offered. It is divided into six chapters that include background information about HIV/AIDS epidemiology in the state, a resource inventory broken down by regions, a needs assessment section focused on target populations, gap analysis, strategies and interventions and finally a message for HIV/AIDS agencies. This guide offers a comprehensive list of HIV prevention strategies and activities that organizations can undertake in order to lower HIV transmission and serve their at risk populations.  

APPENDIX 3: FIELD EPIDEMIOLOGIST/DISEASE COVERAGE AREAS

Note that these figures are also available, in color, in the online version of this guide.

APPENDIX 4: ONLINE RESOURCE GUIDE AND GOOGLE MAP

An abridged version of the resource guide that highlights the essential information and useful links will be available at the site listed below. In addition to the guide a Google map, similar to the one below, will be posted as a widget allowing interested parties to select the testing, public health units and service centers nearest to them.

The online guide is available at www.nptec.gptchb.org under “NPTEC Resources”.
WORKS CITED

This resource guide was produced by the Capacity Building Assistance to Improve the Delivery and Effectiveness of Human Immunodeficiency Virus (HIV) Prevention Services for High Risk and or Racial Minority Populations Project, supported by CDC Cooperative Agreement Number 1U65PS001694-04. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of the CDC.

The printing of this guide was made possible by Cooperative Agreement Number U1B1IHS000-10-00 from the Indian Health Service (IHS), Division of Epidemiology and Disease Prevention. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of the IHS.
